

You need to change the command “infile” in your code, so that SAS can read the data file from your computer. Suppose that the file is in the directory ECO5025 on your desktop. Then you need to change the line in assignment 1:

```
infile 'gas.dat';
```

to

```
infile '\\Client\C$\Users\YOUR USER NAME\Desktop\ECO5025\gas.dat';
```

you can see YOUR USER NAME when you go on citrix
